

STEINFURTH AUTO SAMPLER

The Steinfurth Sampler pierces and pressurizes bottles and cans. Piercing and sampling is performed pneumatically, so there is no need for great manual forces. Fully automatic operation makes beverage sampling even very simple. The Steinfurth Sampler is suitable for gas analyses (e.g. oxygen, CO₂,...) and foam stability measurements.

Advantages

- » Automatic piercing system
- » Automatic sampling system
- » Ergonomic safety housing
- » Easy operation
- » Robust construction
- » Adjustable piercing force
- » Adjustable sampling pressure

Operation

Place the bottle or can on the pressure plate. Adjust the yoke, if not already done, and close the cabinet door. Then switch on the piercing mechanism. The bottle is lifted against the yoke and the bottle closure will be pierced. Lower the standpipe into the bottle, and switch on the pressure.

Technical specifications

- » Pressure range: 0..6 bar
- » Max. bottle diameter: 120 mm
- » Max. bottle height: 340 mm
