

Taber® - Quiet Cabinet

The typical sound level of operating a Taber Abraser and its vacuum system can exceed 80 dB. Utilizing sound deadening materials, the Quiet Cabinet reduces the audible level up to 21 $\frac{1}{2}$ times (20% reduction in decibels) and provides a noise level comparable to a standard office environment. Constructed of laminated particleboard, the Quiet Cabinet includes a high-pressure laminate outer shell which provides added durability and blends with any laboratory or manufacturing environment.

The Quiet Cabinet provides a convenient, dust free workspace for your Taber Abraser and includes ample room to store test specimens, supplies, and accessories.

- » Hinged Plexiglas™ Viewing window
- » Laminated particleboard with high-pressure laminate outer shell
- » Lower cabinet exhaust system
- » Side vacuum hose openings
- » Detachable front
- » Adjustable height leveling feet
- » Magnetic door latch

Designed for optimal performances

- » The upper cabinet features a hinged Plexiglas™ viewing window to monitor testing. A detachable front permits easy transfer of the Abraser into or
- » out of the cabinet. Plus, side vacuum hose openings (left or right) allow the top to be used as a standalone cabinet. The lower cabinet holds the
- » Taber Vacuum unit and includes a built-in exhaust system to provide the proper air circulation. Special large top cabinet available for use with
- » Taber Abraser and Grit Feeder Attachment.

Available in two versions

- » 120V, 60Hz exhaust system
- » 230V, 50Hz exhaust system
